

Korogard® Protective Wallcovering— Repeated Roller Marks

KOROGARD Protective Wallcovering is an extremely durable fire rated protective wall and door surfacing material for application in environmentally controlled building interiors. **KOROGARD** sheets and rolls are widely used in areas subject to high-traffic abuse where **the exceptional impact, gouge, and scratch resistance** of a **KOROGARD** surface **minimizes damage and related maintenance costs**. **Excellent cleanability and chemical resistance** provide maximum protection from stains and graffiti.

The attributes of **KOROGARD** Protective Wallcovering are a result of the specialized extrusion process utilized when manufacturing the acrylic/PVC sheets and rolls. **Color is integral** throughout the product. **Texture and gloss are permanently embossed** as the sheet is manufactured, not in a secondary process.

This specialized extrusion process results in a “repeating pattern” across each panel. This pattern is present on all **KOROGARD** semi-rigid wallcovering. Under certain lighting conditions, this pattern may be more visible on the following colors:

K-28 Maroon	K-39 Deep Green
K-35 Eve Blue	K-PB Mushroom
K-36 Navy	K-PC Mystery
K-37 Sea Green	K-PD Oxford

KOROSEAL Wall Protection Systems suggests that larger samples (24" x 24") (609.6mm x 609.6mm) of the colors above be approved prior to installation on a commercial scale. Repeating patterns are inherent in the product and will not be considered a material defect.

The suggestions and data in this document are based on information we believe to be reliable. They are offered in good faith, but without guarantee, as conditions and methods of use of our products are beyond our control. We recommend that the prospective user determine the suitability of our materials and suggestions before adopting them on a commercial scale.
